

David W. Wilbanks is corporate safety manager, downstream operations, with Gerdau Long Steel North America, based in Tampa, FL. He has more than 20 years' SH&E experience, including international consulting, heavy industry and corporate roles. He holds a B.S. in Industrial Safety and Health from Murrury State University and an M.P.H from Tulane University, and is pursuing a Ph.D in Safety Sciences at Indiana University of Pennsylvania. Wilbanks is a professional member of ASSE's West Florida Chapter.

His Presentation

The United States Bureau of Labor Statistics reports a recent multi-year reduction in the rate of workplace fatalities, but the downward trend appears to have met plateau. Past and current theories and models are examined to identify lessons and actions that can be reliably incorporated to lower the likelihood and severity of major injury accidents, regardless of external factors, economic or otherwise. Broader applications of safe work permit systems are proposed as one
